PROFESSIONAL SUMMARY

Full-Stack Software Engineer with experience designing and delivering scalable, multi-tenant SaaS web applications using React.js, Next.js, Node.js, Express.js. Proven track record of improving system performance (75% API latency reduction), building CI/CD-ready backend services, implementing Role-Based Access Control (RBAC), and integrating AI/ML features in production environments. Strong foundation in RESTful API design, database optimization, and agile software development.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, Next.js (SSR/SSG), Redux Toolkit, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, Role-Based Access Control (RBAC)

Databases: MongoDB, Redis, Query Optimization, Database Indexing

DevOps & Tools: Docker, Git, GitHub, Postman, CI/CD Pipelines

WORK EXPERIENCE

Full Stack Software Engineer — Digimonk Technology

July 2025 – Present | Full-Time

- **Multi-Tenant SaaS Architecture:** Designed and implemented a scalable multi-tenant backend with strict data isolation, enabling secure data segregation across multiple enterprise client organizations.
- **Role-Based Access Control (RBAC):** Built dynamic, policy-driven access control with runtime role configuration, supporting hierarchical user types and permissions across enterprise deployments.
- **API Performance Optimization:** Reduced REST API response times by 75% (2s → 500ms) through pagination, database indexing, and query optimization in Node.js — achieving sub-500ms responses for 77% of concurrent users under peak load.
- **Audit Logging & Compliance:** Developed a centralized audit logging system capturing 100% of system-wide events, improving compliance traceability and reducing debugging overhead.
- **Async Data Pipeline:** Designed a Redis-backed asynchronous upload pipeline processing thousands of Excel rows per batch, reducing ingestion latency by 70% and eliminating timeout failures during enterprise onboarding.
- **Billing & Monetization:** Built a dual-mode billing engine supporting recurring subscriptions and real-time usage-based credit deduction, enabling direct monetization of AI-powered features.
- **User Impersonation:** Developed a secure Login-As feature for tenant-level debugging and support, reducing issue resolution time by ~40%.

PROJECTS

DevidAura.com — Full-Stack eCommerce Web Application (*React.js, Node.js, MongoDB, Express.js*)

- Built and deployed a production eCommerce platform with RBAC, Razorpay payment gateway integration, and a Redux Toolkit-powered persistent cart for a live freelance client.
- Developed a real-time admin dashboard for order tracking, inventory management, and sales analytics.

ChatBase AI — Embeddable AI Chatbot SaaS Platform (*Node.js, Google Gemini API, Vector Search*)

- Engineered a SaaS platform enabling users to upload custom knowledge bases and deploy an AI chatbot on any website via a single script tag, powered by Google Gemini API for context-aware responses.
- Built a Node.js backend with document parsing, embedding generation, and Gemini-based vector retrieval for real-time, knowledge-grounded AI conversations on third-party sites.

EDUCATION

Bachelor of Engineering – Computer Science (C.S.E.)

ShriRam Institute of Information Technology, Bhopal

July 2022 – July 2026 (expected) | CGPA: 8.00 / 10.00
